### ABSTRACT

Lichen planus is a chronic inflammatory mucocutaneous disorder that affects both skin and oral mucosa. The exact cause of oral lichen planus is unknown. It may or may not be associated with skin lesions. Oral mucosa exhibits a variety of clinical patterns, including reticular, plaque, erosive, bullous, and atrophic, with bullous lichen planus being a rare entity. We present a unique case of bullous lichen planus in a 69-year-old female patient with no skin manifestations, as well as a review of literature on bullous lichen planus.
